[00:07.0] PDF Remediation Agent

[00:10.2]

PDF accessibility has never been more urgent. Regulations like the EAA, ADA, and AODA have put it firmly in scope. But remediating PDFs has always been slow, expensive, and hard to scale. This is why we introduced our PDF Remediation Agent.

[00:28.1]

Whether you're tackling a single document or clearing a backlog, the agent handles all of the heavy lifting. It automatically applies tags, headings, document properties, and navigation to bring your PDFs up to standard.

[00:43.2]

From within your PDF dashboard you can remediate in two modes: Fine tune, which is when you fix accessibility gaps while keeping your existing accessibility work intact and Reapply, which rebuilds accessibility from scratch when you need a clean slate.

[01:02.5]

The agent also surfaces issues that require human judgment, so your team stays in control of the decisions that matter most. And with bulk remediation and a full PDF report, you can work through your entire library and document your progress without ever leaving the platform that you're already using.

[01:24.0] Writing & Optimization Agent

[01:27.3]

With the rise of AI-driven search, it is crucial that all content efforts are designed for mentions, citations, and search performance. This is why we introduced our writing and optimization agent. You can collaboratively create content with the agent, ensuring that your expertise is highlighted while aligning your content with your search performance goals.

[01:48.4]

The agent assists authors in refining and producing content at scale by supporting human authors in generating ideas and refining their writing, providing topic scoring to ensure your draft addresses all necessary aspects to perform well across various Search services, conducting advanced evaluations to ensure your content meets high standards, and offering customized recommendations to help your content stand out.

[02:13.8]

The agent empowers authors to maintain control while also implementing enterprise-grade guidelines that ensure the content is authentic, relevant, and optimized for performance.
